EDUCATION

NORTHEASTERN UNIVERSITY

Master of Science in Information Systems

GPA: 3.84 / 4.0

Boston, MA

May 2024

NATIONAL CENTRAL UNIVERSITY (NCU)

Master of Business Administration in Information Management

GPA: 4.08 / 4.3

Taoyuan, Taiwan

July 2022

NATIONAL CENTRAL UNIVERSITY (NCU)

Bachelor of Business Administration in Information Management

Taoyuan, Taiwan

June 2020

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL, Shell, HTML5/CSS

Front-End & Back-End Frameworks: Vue.js, React, Flask, REST APIs, Gradio

Generative AI / LLM: LangChain, LangGraph, Google ADK, vLLM, SGLang, LiteLLM, Unsloth, LLaMAFactory

AI Observability / Governance: Langfuse, OpenTelemetry, Prometheus, Grafana, Microsoft AGT

Cloud / DevOps: AWS, Docker, Kubernetes, NGINX, Git

Data / Infrastructure: PostgreSQL, ClickHouse, Redis, MinIO

PROFESSIONAL EXPERIENCE

DELTA ELECTRONICS

Data Scientist

Taipei, Taiwan

July 2025 - Present

- Design and operate an enterprise generative AI and LLM service platform spanning model inference, API routing, authentication, usage auditing, user feedback, and service monitoring, enabling business units to build AI applications and accelerate development with agent harnesses.
- Helped build the internal LLM platform, owning hardware sizing and inference architecture design to improve operational and developer efficiency.
- Established observability and continuous-improvement workflows by integrating Langfuse, OpenTelemetry, Prometheus, and Grafana to track request patterns, model latency, tool-calling success rates, agent skill execution, and user feedback; used findings to refine models and deployment strategies.
- Contributed to an internal coding harness and custom MCP servers, implementing end-to-end tracing and record propagation.

TAIWAN WEB SERVICE CORPORATION

AI Consultant Engineer

Taipei, Taiwan

October 2024 - June 2025

- Designed and deployed vLLM-based inference services; analyzed model requirements and throughput to recommend models, hardware, and system architectures tailored to client use cases.
- Led LLM fine-tuning POCs across healthcare and financial services, using Hugging Face TRL, Unsloth, DeepSpeed, and LLaMAFactory for SFT and LoRA, with tensor parallelism, pipeline parallelism, and gradient checkpointing.
- Authored model training and installation documentation that accelerated internal and client deployment of generative AI services on the company's cloud platform.
- Delivered internal training and external technical seminars on LLMs, model deployment, and cloud AI architecture, communicating effectively with technical and non-technical audiences.

DATA SCIENCE AND INTELLIGENT HEALTHCARE LABORATORY, NCU

Research Assistant

Taoyuan, Taiwan

September 2020 - July 2022

- Analyzed more than 320,000 Yelp restaurant reviews with Word2Vec, Doc2Vec, and BERT; built text-processing and feature-analysis pipelines to identify characteristics of fine-dining reviews.
- Applied vector representations and cosine similarity at scale to build a recommendation algorithm that identified the top 20 affordable restaurants most associated with fine dining.
- Partnered with Dunqian Hotel Management Group on large-scale data collection, including automated scraping from major online travel agency (OTA) websites.

LINE GAME, LINE TAIWAN LIMITED
Technical Assistant Intern

Taipei, Taiwan
July 2019 - July 2020

- Provided technical support to the LINE GAME team and contributed front-end features to 'LINE GAME University,' a CRM program serving more than 100,000 users.
- Built a LINE chatbot to manage game-server updates, using webhooks to trigger backend shell scripts and automate game patch deployment.
- Designed marketing chatbot message templates with JSON, CSS, and the LINE Messaging API, earning positive user feedback.

MASTER'S THESIS

Enhancing Personalized Outfit Recommendation with Meta-Paths and Attention Mechanisms
National Central University

Taoyuan, Taiwan
June 2021 - June 2022

- Implemented a personalized outfit recommendation model based on Bayesian Personalized Ranking (BPR) and co-attention. Used meta-paths to model individual preferences and weight recommendations, jointly accounting for visual compatibility and personal styling preferences; improved AUC by approximately 0.03 over the state of the art at the time.
- Built a multimodal recommendation framework with NumPy, PyTorch, and Keras, combining user preferences with visual apparel features to generate personalized outfit combinations.

CERTIFICATIONS

- [Microsoft Certified: AI Transformation Leader](#) (Issued: July 2026)
- [AWS Certified Developer - Associate](#) (Issued: January 2024)
